Excerpt: .the origin Fig. 3.--Appeau. f patient, in whom were noted edema, disproportion between face, neck, chest and the rest of the body and the presence of varices on the abdominal wall. of the inferior mesenteric artery. The ligature was drawn tighter until pulsation was no longer perceptible in the iliac arteries and barely so in the aorta below the ligature. Recovery from the operation was uneventful; the patient was kept in bed for two months and treated with potassium iodide. After four months he returned to his work and about thirteen months after the operation was working hard and looking well. Thrombosis Of The Aorta. Aubertin<sup>2</sup> by reporting 2 cases raises the recorded number to 34. The most characteristic symptom is a symmetrical gangrene of the legs; this was present in 18 of the 34 cases. 1 Annals of Surgery, 1921, 74, 308. 2 Annales...

### Reviews

*This book is great. It is written in simple words and not difficult to understand. I discovered this pdf from my dad and i suggested this ebook to find out.*

-- **Prof. Webster Barrows**

*This ebook is fantastic. We have read and i also am confident that i am going to read through again yet again in the future. I am easily can get a pleasure of reading a published ebook.*
