## PRACTICAL LESSONS IN FRACTIONS: BY THE INDUCTIVE METHOD ACCOMPANIED BY FRACTION CARDS (CLASSIC REPRINT)

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from Practical Lessons in Fractions: By the Inductive Method Accompanied by Fraction Cards The children in the third-year grade of the primary school are expected to answer such questions as,  $\frac{3}{4}$  of \$28 = ? of 40 apples = ? of 56 peaches = ? etc. There are ways by which the child can be taught to obtain answers to such questions, without his gaining any idea of what fractions really are. He can learn that because  $2 \times 4 = 8$ , that  $\frac{1}{4}$  of 8 is 2; and 4 times 3 being 12, that  $\frac{1}{4}$  of 12 is 3; and as 4 times 7 are 28,  $\frac{1}{4}$  of 28 is 7. Then, as  $\frac{3}{4}$  of 28 is asked, he takes 7 three times. Yet, if you were to ask him which is the larger,  $\frac{1}{4}$  or, he would in most cases answer, because 5 is larger than 4. This plan works quite well with certain children, while with others who are slower, it does not. Again, if the child does not know his tables, or forgets them, he has no way of obtaining his answers. Most teachers, I believe, try to give the children an idea of what halves, thirds, fourths, etc., are, by dividing objects or figures, either circles or lines, into fractional parts, so that they may know that the objects must be divided into two or more equal parts. If this plan were carried on, the children would gain some idea of fractions, but it is rather difficult, with only this amount of drill, to think of 56 apples and divide them into 7 equal parts.
