Read Books, United Kingdom, 2008. Hardback. Book Condition: New. 216 x 140 mm. Language: English . Brand New Book ***** Print on Demand *****.MATHEMATICS FOR THE AVIATION TRADES by JAMES NAIDICH. Originally published in 1912. PREFACE: This book has been written for students in trade and technical schools who intend to become aviation mechanics. The text has been planned to satisfy the demand on the part of instructors and employers that mechanics engaged in precision work have a thorough knowledge of the fundamentals of arithmetic applied to their trade. No mechanic can work intelligently from blueprints or use measuring tools, such as the steel rule or micrometer, without a knowledge of these fundamentals. Each new topic is presented as a job, thus stressing the practical aspect of the text. Most jobs can be covered in one lesson. However, the interests and ability of the group will in the last analysis determine the rate of progress. Part I is entitled A Review of Fundamentals for the Airplane Mechanic. The author has found through actual experience that mechanics and trade-school students often have an inadequate knowledge of a great many of the points covered in this part of the book. This review will serve to consolidate the students information, to reteach what he may have forgotten, to review what he knows, and to provide drill in order to establish firmly the basic essentials. Fractions, decimals, perimeter, area, angles, construction, and graphic representation are covered rapidly but systematically. For the work in this section two tools are needed. First, a steel rule graduated in thirty-seconds and sixty - fourths is indispensable. It is advisable to have, in addition, an ordinary ruler graduated in eighths and sixteenths. Second, measurement of angles makes a protractor necessary. vi Preface Parts II, III, and...
